This Pitch includes data that shall not be disclosed outside the Government, except to non-Government personnel for evaluation purposes, and shall not be duplicated, used, or disclosed -- in whole or in part -- for any purpose other than to evaluate this submission. If, however, an agreement is awarded to this Company as a result of -- or in connection with -- the submission of this data, the Government shall have the right to duplicate, use, or disclose the data to the extent agreed upon by both parties in the resulting agreement. This restriction does not limit the Government's right to use the information contained in this data if it is obtained from another source without restriction.

National DigiFoundry (NDF)

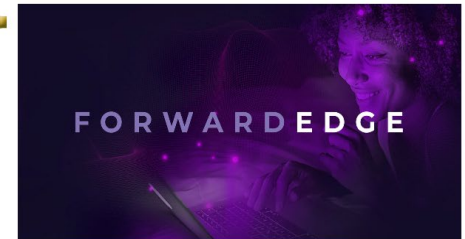

The NDF is a national collaboration initiative to foster continuous innovation in the digital asset ecosystem. It represents an opportunity for public and private sector innovators to work together to mitigate and deal with a range of risks, frauds, and scams in this space.

MISSION: Collaboratively exploring global standards and best practices for the use and exchange of digital assets.

How does the NDF Work?

- Like a DAO ([Decentralized Autonomous Organization](#)), each action or vote is represented by a transaction on the [blockchain](#)
- Members are represented by a unique address on the blockchain.
- Tokens represent share ownership in the DAO-like organization and are used to vote and exchange internal resources.
 - Utility – Vote on establishing workgroups, Publishing/Endorsing digital asset industry recommendations, or DACH-sponsored activities (i.e., conferences, speaker series, etc.). Also used to access professional training on blockchain, cryptocurrency, and other Web 3.0 topics.
 - Governance – Decisions related to DAO operations or group strategy
- Report becomes component of NDF reporting to the NSF

HYPERGRAPH TRANSFER PROTOCOL

Hypergraph Network

HGTP is a distributed ledger technology known as a directed acyclic graph (DAG) protocol with a novel reputation-based consensus model called Proof of Reputable Observation (PRO). Hypergraph is a feeless decentralized network that supports the transfer of \$DAG cryptocurrency.

Secure

The decentralized DAG architecture offers cryptographic security at scale for all data traversing the network.

Decentralized

300+ globally distributed foundational nodes ensure decentralized performance and consensus.

Infinitely scalable

The DAG architecture — designed for high throughput data pipelines — performs concurrent consensus.

Truly interoperable

The Layer 0 data transfer layer supports endless types of metagraphs operating on the Layer 1 above allowing for complete interoperability across channels.

Feeless

There are no required fees for transacting on the Hypergraph and accessing bandwidth.

Blazingly fast

Hypergraph benchmarked 80K transactions in 7 seconds with only 6 nodes, and gets even faster as the network scales.

Stargazer Wallet

Easy to Follow Instructions →

Setup Guides:

- iOS
- Android
- Desktop

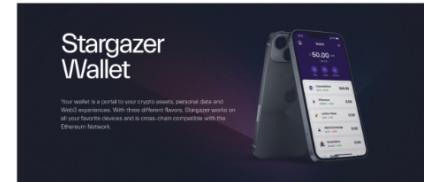

Note:

One wallet address is to be used for ONE NDF entity. Multiple wallets can be setup to share the same address. A wallet owner must be designated at each company who is responsible for the tokens and providing access to other members on their team via the core wallet seed phrase.

Support contacts provided in the Instructions document.

This doc is available on the NDF member portal for download.
